

Name: Dana Elizabeth Ponce Del Angel

NAO ID: 3354

Date: October 2nd, 2025

Pathway: Becalos x TechnoReady.

Sprint: Sprint 3.

Title of the Challenge: Server and Database Commands

Backlog.

Table 1.

User Stories	Requirements
As Renata, I want to review the Google Scholar API documentation so I can understand how to retrieve author information.	Access API documentation, understand endpoints, authentication, and JSON response structure
As Elizabeth, I want to design a data model to represent Google Scholar author information so I can store it effectively in Java.	Define Java classes to store author details, including name, publications, citations, and h-index
As Elizabeth, I want to implement a view to display author search results so users can see the retrieved information.	Create a GUI (or console output) to present author info in a readable format
As Elizabeth, I want to create a controller to handle GET requests to the Google Scholar API so I can fetch author data programmatically.	Develop Java controller class that sends HTTP GET requests and receives JSON response
As Renata, I want to integrate the model, view, and controller into a functional MVC application so the system works as a cohesive unit.	Combine model, view, and controller classes into a working MVC program

Table 2. Prioritize List.

Requirements	Stages	Time Estimation	Deliverables.
Review Google Scholar API documentation	1	7 hours	Notes on endpoints.
Desing a data model	2	7 hours	Java classes representing author info with attributes.
Use Java HTTP library	3	7 hours	Setup Apache HttpClient to perform GET requests successfully
Create controller for GET requests	3	7 hours	Java controller that fetches data from Google Scholar API
Integrate MVC application	3	7 hours	Functional MVC application.
